PROJECTS

Blockchain Based E-Voting System (2022)

This project deals with the concept of developing an electronic voting system using blockchain technology. The objective is to solve the issues of digital voting by using blockchain technology. Blockchain enabled e-voting could reduce voter fraud and increase voter access.

Reusable Captcha Security (2019)

This project deals with developing better CAPTCHAs. The best CAPTCHA would allow all human to pass through, while rejecting all machine and will increase the difficulty in bypassing the system by use of improve algorithm.
